## Networks, Topology and Dynamics

### Theory and Applications to Economics and Social Systems

The volume, devoted to recent contributions to the field of networks modelling, offers a wide panorama of recent advances, both theoretical and methodological, that will interest academics as well as practitioners. Theory and applications are nicely integrated: theoretical papers are in graph theory, game theory, coalitions, dynamics, consumer behaviour, segregation models and new contributions to the area are offered. The applications cover a wide range: airline transportation, financial markets, work team organization, labour and credit market. The volume can be used as a reference book for graduate and postgraduate courses on network theory and complex systems in faculties of economics, mathematics, engineering or social sciences. ... *more on <http://springer.com/978-3-540-68407-7>*
