

Supplementary Fig. 1. Pretreatment of HL-1 with OleA and confocal control. (a) HL-1 pretreated with OleA for 24 h before the treatment with 20- $\mu$ M TTR aggregates. Cell viability was assessed by the MTT reduction assay. Error bars indicate the standard deviation of independent experiments carried out in triplicate t-student analysis: \*  $P < .005$ ; \*\*  $P < .001$ ; \*\*\*  $P < .0001$ . (b) Confocal images with native TTR immunostaining (blue) and GM1 (magenta) on HL-1 cell plasma membrane.
